Drain Pans for Water Heaters, Washing Machines, and Dishwashers

About Camco

Camco makes quality aftermarket plumbing and hardware products for water heater parts, drain pans, oven and range parts, and more.

At heart, Camco is a small company with big aspirations. Since 1966, we have earned a reputation for providing superior goods with high customer satisfaction. We also work with inventors, entrepreneurs and small businesses to bring innovative products into the marketplace.

At our core, we believe in manufacturing exceptional products, maintaining competitive pricing and superior service – all while providing a great customer experience.

Our company headquarters is located in Greensboro, North Carolina. Camco also has numerous manufacturing facilities in the United States and around the globe.

When it comes to your plumbing and hardware needs, Camco provides the best repair and replacement parts for a job done right.

New Products

Element/Anode Wrench, Dual Hex Ends

Camco's Anode/Element Wrench includes dual hex ends to help you maintain both your water heater's elements and anodes. The anode end features a 1 1/16" hex that fits all standard residential and RV anode rods. The other end fits all standard screw-in elements with a 1 1/2" hex on residential screw-in water heater elements. The wrench is constructed of durable, zinc-plated steel. Measures 10" long.

Page 15

Dishwasher Drain Pan, Black

Camco's Dishwasher Drain Pan helps prevent expensive repair costs by alerting you to dishwasher leaks that would otherwise go undetected. It is designed to flow water to the front of the dishwasher so that you can see it before any water damage has occurred. Made of durable polypropylene, the drain pan will not rust, corrode or crack. It measures 24" x 20.5" OD and is made in the USA.

20601

Page 20

Washing Machine Drain Pan, Graphite

Camco's Washing Machine Drain Pan protects your floor from washing machine leaks. Easy to use, simply slip the drain pan under your washing machine and check it regularly for standing water. The pan measures 30" x 32" (OD) and 27" x 30" (ID). It includes a 1"/1 ½" PVC drain fitting, locknut and washer. The graphite-colored pan is made from injection molded, no break plastic for superior strength and durability. Pre-formed cut lines make installation easy. Made in the USA.

20754

Page 20

Washing Machine Drain Pan, Low Profile, Graphite

Camco's Low Profile Washing Machine Drain Pan protects your floor from washing machine leaks. Easy to use, simply slip the drain pan under your washing machine and check it regularly for standing water. It is compatible with front loading washing machines. The low lip design allows for clearance when opening pedestal drawers. The pan includes a 1"/1 ½" drain fitting, locknut and washer. Pan measures 30 ½" x 34 ½" (OD) and 29" x 33" (ID). It is made from injection molded, no break plastic for superior strength and durability. Pre-formed cut lines make installation easy. Color: graphite. Made in the USA.

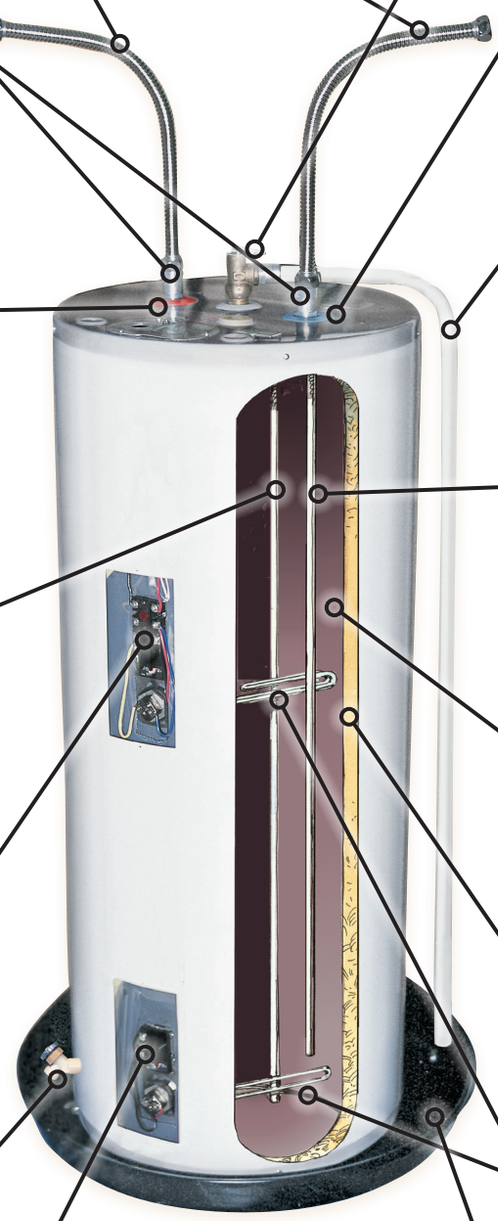
Residential Electric Water Heater Construction



Flexible stainless steel or copper connectors—connects to hot and cold water pipe system

Dielectric nipples or heat traps—with thermoplastic lining to help prevent thread corrosion

Hot water outlet—water supply to house faucets

Anode rod—a rod composed of sacrificial metal to help prevent deterioration of the steel tank and elements by controlling electrolysis

Upper thermostat—turns heating elements on or off to maintain preset or desired temperature; regulates power to the lower thermostat

Drain valve—a metal or plastic valve used when draining heater for periodic cleaning or replacement of a defective water heater element

Lower thermostat—controls lower heating element to maintain desired temperature

Temperature and pressure (T & P) valve—safety device to relieve excessive pressure and/or temperature buildup in tank

Cold water inlet—supplies water for heating to the tank

Run-off tube—carries water or steam safely to drain or drain pan if T & P valve activates

Cold water dip tube—a non-metallic tube that directs incoming cold water to the bottom of the tank

Steel tank with glass lining—prevents corrosion

Insulation—helps maintain consistent water temperature

Heating element—a resistant type electrical component to generate heat

Drain pan—plastic or metal pan to collect and drain off leaking water or water from activated T & P valve; must be plumbed to drain

Frequently Asked Questions

Ordering and credit request instructions:

- **Submit purchase orders via e-mail to: plumbingPO@camco.net, or by FAX to 336-668-2049 Attn: Plumbing/Hardware**
- **Submit order status inquires to: plumbingPO@camco.net**
- **Submit all shortage/defective claims or RGA requests via e-mail to plumbingPO@camco.net. Please provide the item numbers and descriptions, reason for credit or RGA request and the PO number or invoice number on which the item(s) was/were originally purchased. Allow six weeks for processing.**
- **Submit all inquires for specials projects/job quotes to: plumbingPO@camco.net; the request will be forwarded to Sales.**
- **Please contact the appropriate sales team member for special quotes, or send a request to the customer service email address if you are unsure of whom to contact. A customer service member will make sure that your request gets forwarded to the appropriate individual in a timely manner.**
- **When sending requests to the customer service email, you should receive an immediate automated response that your email has been received into this mailbox. If you do not receive this automated response, please contact us immediately, as your request may not have been received properly due to firewalls, system issues, etc. This is imperitive if you need immediate assistance or have a purchase order that needs priority handling.**

Electric Water Heater Elements

I don't have hot water. How do I determine what is wrong?

Check the breaker or fuse box for a blown fuse or tripped breaker. If this is not the problem, shut off the power to the water heater. (IMPORTANT!) The problem may be caused by a defective or shorted element(s) or thermostat(s) or both. If you are experienced with plumbing and electrical tools, you can do the repairs yourself. If you are at all hesitant, call a plumber or electrician. Camco Mfg. provides a water heater tester (#10023) that lets you test the elements and thermostats while they remain installed on the heater. Instructions are included.

What causes water heater elements to fail, some sooner than others?

Several reasons: power surges, lime buildup and dry-firing. Most water heaters are sold with high watt-density (HWD) elements. These are the least expensive and are the most susceptible to these problems. On a "Standard-Better-Premium" scale, the HWD elements are STANDARD.

Why are some water heater elements folded back?

These are low watt-density (LWD) elements. The heat output (watts) per square inch of surface area is lower than that of a regular element. In order for total heat to be the same, the total surface has been increased. It is folded back so the length will fit the tank. Not all LWD elements are fold-backs. In areas with "hard" water, a LWD element resists lime build-up on its surface, thus extending its life. These elements are BETTER.

What are Lime Life elements?

These elements are PREMIUM. They are made of high-performance nickel-chromium stainless steel and are ultra low watt-density. These features help prevent lime build-up and extend the life of the element. A Lime Life element is resistant to dry-firing. These Lime Life elements carry a limited 5-year warranty. Because of the low watt-density, these elements are folded back to reduce the length. Some are rippled to further reduce the length to fit the diameter of the tank.

What is meant by the term "dry-firing?"

High watt density and low watt-density are designed to function in water. If not surrounded by water, the intense heat they generate (dry fire) will cause them to burn out. The water tank must be full of water whenever the power is on. Dry-fire failure is not covered by any warranty. It is a human error. Dry-fired elements are easily detected. The element is soft and easily bent. In most cases, a hole is burned through the surface.

Can I replace the element in my water heater with higher wattage elements?

It is not recommended. The water heater is designed for that element size. Higher wattage might require heavier gauge wire and a larger capacity circuit breaker.

Can I use a water heater element in an application other than a water heater?

It is not recommended. These elements are designed specifically for residential water heaters. We have no experience or knowledge of other uses. You may do so at your own risk. Non-water heater use of our elements and thermostats voids all warranties. The only exception to this is homebrew elements which have a 1 year warranty for non-water heater use.

I just installed a water heater element and now my heater makes a humming sound.

This is called a "harmonic." If the element is installed so that the loop is horizontal, the vibration from the electric current will cause the element to hum. This noise can be prevented by installing so that the loop is vertical. The flanged elements have markings on the flange, indicating the vertical position of the loop. Screw-in elements also have the vertical position marked; to eliminate the humming on screw-in elements, tighten the element another half turn. In some instances, less than a half turn will stop the harmonic.

Why aren't the two elements operating simultaneously?

In most residential water heaters, only one element is on at any given time. The lower element does 90% or more of the heating. During periods of heavy use, the upper element switches on (the lower switches off) and heats the upper part of the tank to 120°. It then shuts off, turns on the lower, and it heats the water to the setting of the lower thermostat.

72001 Plumbing and Hardware 2021.indd 4 12/9/21 4:35 PM

Frequently Asked Questions

Electric Water Heater Thermostats

Are water heater thermostats adjustable?

Most water heater thermostats provided by Camco are adjustable. They are factory set at 120° F. On a two-element water heater, it is not recommended that the upper thermostat be adjusted. If a higher water temperature is desired, adjust the lower to a higher setting. Both may be lowered if a cooler temperature is desired. **Adjusting above 120° F can cause severe burns or death.**

I noticed that there are two styles of water heater thermostats. Are they interchangeable?

Yes, like models of the two thermostat manufacturers are interchangeable. Use caution in selecting the correct model for their position on the heater (upper, lower, single element T-stat). Terminal positions between the brands may not be the same and in some cases, the water heater wiring may need to be extended. When possible, it is recommended to replace with the same brand.

How do I know which thermostat to buy?

A two-element water heater has two thermostats: an upper and a lower. Each must be replaced with a thermostat with the same function: upper for upper, lower for lower. They cannot be interchanged, as they perform specific functions. A single-element water heater has only one thermostat and that is called a "single element thermostat." The upper and lower thermostats for a two-element heater cannot be used on a single-element water heater and vice versa.

Other Miscellaneous Questions

I opened the drain valve and very little water flowed.

You probably have sediment and scale build-up on the bottom of the tank that is blocking the valve. In areas where the water is very "hard" or well water is used, lime build-up can occur. The high heat of the heater elements will cause scale and sediment to coat the elements and settle on the tank bottom. Light build-up of sediment may be removed by attaching a water hose to the drain valve. Drain the tank every 6–12 months; more often if necessary. Important: Turn off power first or it could cause element burn out.

The Temperature and Pressure relief valve has a threaded outlet. What attaches to it?

The T&P valve outlet must have a run-off tube attached to it. Most building codes require a tube that terminates 6" from the floor. If the T&P valve activates, water should flow into a drain or into a water heater pan that is plumbed to a drain. This run-off tube may be metal or plastic. Check local plumbing codes for correct material for your area.

What are dielectric fittings and connectors?

When fittings of unlike metals are joined together (copper with steel, brass with steel, etc.), the faint electrical current that is present in any water pipe system will cause corrosion of the threads in one or both of the fittings and cause leaking. The plastic liner or sleeve in the dielectric fittings and connectors prevents this from happening.

What is an anode rod?

It is a magnesium or aluminum rod inserted in the heater, from the top, in an opening of its own or as part of the outlet nipple. The metal is self-sacrificing (corrodes); this helps protect the tank and elements from corroding. Replacement anode rods are available and easy to install.

Are water heater drain pans necessary?

It depends on the plumbing codes in your area and the location of your water heater. If your heater is in a garage or a non-finished basement where leaking water would flow harmlessly into a drain, a pan is not necessary. However, if the heater is in or above a living space where leaking could cause extensive water damage, it is cheap insurance to protect your home from such an event. Plumbing codes require the use of a drain pan when finished surfaces could sustain damage from a leak.

What type of pan should be used?

Plastic pans should be used with electric water heaters, and metal pans should be used for gas water heaters and can be used with electric water heaters. Codes in some areas require metal pans for all heaters installed in a living space.

What is the purpose of a water heater stand?

A stand is used primarily with gas water heaters when installed in garages and basements where combustible fumes may exist. Gas heaters have an open flame, and tests have shown that placing a gas water heater at least 16" above the floor will offer some protection against combustion of volatile fumes.

Water Heater Element Warranty

- **Standard and Better Elements: 1 year from purchase date.**
- **Premium Elements: 5 years from purchase date.**

LIMITED WARRANTY: Camco warrants this product to be free from defects in material and workmanship under normal use and service conditions for 1 year for standard and better elements and 5 years for premium elements from the date of first purchase. Camco's liability is limited solely to the replacement of any defective product returned to us. To the extent allowable by law, Camco makes no other warranty, either expressed or implied, nor assumes any liability for incidental or consequential damages resulting from the use of this product or for breach of warranty of merchantability or fitness for a particular purpose. Submit warranty claims to Camco Manufacturing, 121 Landmark Drive, Greensboro, NC 27409.

Water Heater Elements

Fits most models: American • A O Smith • Bradford White • Craftmaster • General Electric • GS Wood (some models) • Kenmore • Lochinvar • Maytag • Mor-Flo • Reliance • Rheem • Richmond • Ruud • Sears • State • Whirlpool

Premium—Lime Life Water Heater Elements • Ultra Low Watt Density • Our best immersion elements

UL listed for USA and Canada • 5 year limited warranty (see page 5) • Detailed instructions and gasket included with each packaged element

Made with high-performance nickel chromium stainless steel alloy and plated carbon steel bushings/flanges.

Ultra low watt density • Resists dry firing • Best when water has high mineral content • Heats in lime and sand buildup that would burn out ordinary elements

Water Heater Elements

Marathon Elements—1 1/2" – 12 UNF thread screw-in style universal replacement elements for the Rheem® manufactured Marathon® water heaters. The upper element sheath is made of copper tubing with a brass hex bushing and contains a thermal fuse to protect the water heater from damage due to a dry-fired element. The lower element sheath is made of high performance nickel-chromium stainless steel alloy tubing with a brass hex bushing. Instructions and gasket are included. UL listed. 5-year limited warranties on upper and lower elements.

Stock #	Watts @ 240v	Watts @ 120v	Nominal Voltage	Type	Sheath Length	Case Qty

Water Heater Repair

Water Heater Repair Kits—for the DIY or professional plumber

All the parts needed to repair or renew an electric water heater system

Fits most models: American • A O Smith • Bradford White • Craftmaster • General Electric • GS Wood (some models) • Kenmore • Lochinvar • Maytag • Mor-Flo • Reliance • Rheem • Richmond • Ruud • Sears • State • Whirlpool

Standard - With High Watt Density Elements

Stock #	Description	Qty
07013	Plumber's Pack w/Therm-O-Disc Style T-stats Contains: (2) #02342 High Watt Density Elements 4500w 240v (1) #08122 Therm-O-Disc lower thermostat (1) #08162 Therm-O-Disc upper thermostat	6
07023	Plumber's Pack w/Apcom Style Thermostats Contains: (2) #02342 High Watt Density Elements 4500w 240v (1) #07722 Apcom style lower thermostat w/protector (1) #07862 Apcom style upper thermostat w/protector	6

Better - With Low Watt Density Elements

07033	Plumber's Pack w/Therm-O-Disc Style T-stats Contains: (2) #02582 Low Watt Density Elements 4500w 240v (1) #08122 Therm-O-Disc Lower Thermostat (1) #08162 Therm-O-Disc Upper Thermostat	6
07043	Plumber's Pack w/Apcom Style Thermostats Contains: (2) #02582 Low Watt Density Elements 4500w 240v (1) #07722 Apcom Style Lower Therm. w/ Protector (1) #07862 Apcom Style Upper Therm. w/ Protector	6

Best - With Ultra Low Watt Density Lime-Life Elements

07044	Plumber's Pack w/Apcom Style T-stats Contains: (2) #02922 Ultra Low Watt Density Lime Life Elements 4500w 240v (1) #07722 Apcom Style Lower Therm. w/ Protector (1) #07862 Apcom Style Upper Therm. w/ Protector	6

Water Heater Element Quick Change Tool

NO NEED to drain your tank

Save time and water! With the patented Camco Water Heater Element Quick Change Tool, there is no need to drain your tank when replacing an element. Simply follow the included instructions and you will have your water heater repaired and operational in a fraction of the time that it takes to drain your tank. The Camco collapsible bucket is the perfect item to use in conjunction with this Quick Change tool. Use the QR code above to watch the instructional video on YouTube.

09973 Quick-Change Tool — Carton Qty: 12

Collapsible Buckets

The perfect size for many around-the-house uses. Also great for RVing, camping, fishing and more. Great for use in tight spaces, under sink drain traps and water heater drain valves. Opens to 9.25" and folds down to less than 2" for compact storage. Zippered storage bag included.

42993 Blue Bucket — Carton Qty: 4
42994 Camouflage Bucket — Carton Qty: 4

Water Heater Thermostats

Apcom Style—UL listed for US and Canada • Meets original specification lengths for American, AO Smith, Bradford White, GE, GSW, Kenmore, Maytag, Reliance, Rheem, Richmond, Ruud, Sears, State, and Whirlpool • Carded thermostats are packed in convenient cut cases and come complete with detailed instructions and wiring diagrams for easy installation • Built-in safety switch to help prevent overheating • Energy-efficient range setting • Apcom thermostats include a plastic terminal protector. All thermostats should have a terminal protector in place before the water heater cover plate is reinstalled.

Single Element Water Heaters

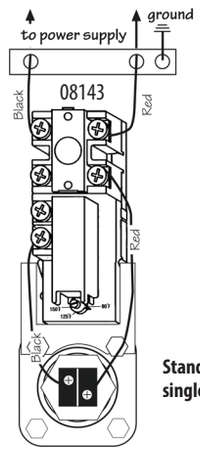
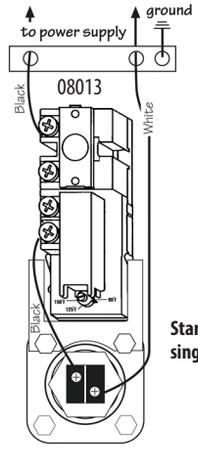
Can be used as 120v by bypassing screws on right side.





Water Heater Thermostats and Accessories

About Electric Water Heater Thermostats

Double Element Heaters

The majority of residential water heaters are designed with two elements controlled by two different thermostats. The upper thermostat is the "brain" of the water heater. It controls the heat generated by the upper element and it controls power delivered to the lower thermostat. Most residential water heaters are designed to have the upper and lower thermostats work separately.

The upper and the lower thermostats never operate simultaneously. The upper thermostat has a safety device attached to it called a High Limit Control (HLC). It has a heat sensor that will shut down the power to the heater if the temperature of the tank exceeds safety limits. The button may be reset to restore power to the heater. **Do not reset the HLC until the problem causing the unit to trip is corrected.**

Operation Cycle of Double Element Heaters

1. The upper thermostat senses cold water and has energized the upper element. Although contacts on both thermostats are normally closed in response to the cold water, the double-throw upper thermostat completes the circuit only to the upper heating element. Because of the double throw action, power to the lower thermostat is cut off.
2. As the upper element operates, it heats the water above it (approximately one quarter of the tank's capacity).
3. The water in the upper quarter of the tank is heated until it reaches the temperature set on the upper thermostat. The upper thermostat then breaks the circuit to the upper heating element and completes the circuit to the lower thermostat.
4. The lower element then operates and heats the remainder of the water in the tank.
5. The lower thermostat breaks the circuit to the lower element when the water in the lower portion of the tank has been heated to its setting. The entire tank is now filled with hot water.
6. As hot water is drawn from the top of the tank, cool water is delivered to the bottom of the tank through the dip tube. The lower thermostat reacts to the entering cold water by closing its contacts, energizing the lower heating element and heating the water as it enters the tank.
7. Thermostats are factory preset at 120° F.

Single Element Heaters (with high limit)

Most of the smaller water heaters and point-of-use heaters are designed with only one element and thus only one thermostat. Most of the single element water heaters are wired for 120v. Never connect or adapt a 120v water heater to a 240v system.

The high limit control is located on the thermostat. (See diagrams for proper wiring.)

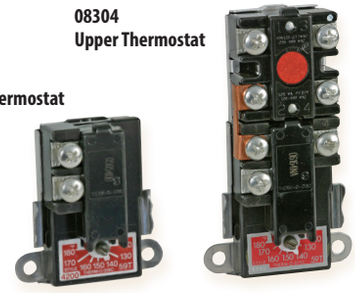
Note: Because the HLC is attached to the single element thermostat, it looks similar to an upper thermostat for a two-element heater. Care should be taken in choosing the correct replacement thermostat. An upper thermostat will not work on a single element heater.

Therm-O-Disc Commercial Thermostats

Stock #	Description	T-O-D Style	HLC	Application Voltage	Qty
08304	Upper Thermostat - 180° F	59T	Yes	480/240/208/120	6
08314	Lower Thermostat -180° F	59T	-	480/240/208/120	6

HLC = High Limit Control

For Commercial Use Only • UL Listed
These thermostats are for commercial use only; not to be used in a domestic setting.
Therm-O-Disc Style Thermostats are not supplied with a Protective Shield. Order 08113 or 08103 (page 11) if shield is damaged or missing.



08304
Upper Thermostat

08314
Lower Thermostat

Water Heater Continuity Tester

Tests elements and thermostats while they are in the heater. May also be used to test continuity in fluorescent lights, fuses and all appliances. Sensitive enough to measure even the fine filament wire in a light bulb. Sensitive LED light indicates continuity. More useful than a circuit tester. Complete instructions and batteries included.

Gas Water Heater Stands

Many local building codes require a water heater stand for gas water heaters located in areas where the accumulation of combustible fumes may occur. Constructed of galvanized steel. Minimal assembly required. Each stand is 18" high. For use with most residential water heaters.

11231	21" x 21" - For up to a 50 gal tank Holds up to 650 lb	1
11235	24" x 24" - For up to a 100 gal tank Holds up to 1200 lb	1

Heated Drinking Water Hoses with Thermostat

Protects to -20° F

Made with an NSF 61 certified, 5/8" I.D. drinking water safe hose that is BPA, phthalate and lead-free. Won't leach harmful chemicals into water or leave it tasting like plastic. Energy saving thermostat only heats as needed, saving money on your electric bill. Fittings are heavy-duty machined and plated for maximum corrosion resistance and the durable exterior jacket protects water hose and electrical components from damage or exposure. Protects to -20° F. Operates on 120 VAC.

Propane Campfires

Big Red Campfire®

Take your fire with you! Our Big Red Portable Campfire is great for campsites with restrictions against in-ground fires. Take it tailgating, or put it on the patio. . . its size is convenient for wherever you need a fire. Realistic log set and full 9.5" diameter ring burner help create the natural look and ambiance of from-scratch campfires. Sturdy lid and security latches make it safe and easy to transport. Self storing lid can also serve as a Campfire base. Includes 10' propane hose for use with standard LP gas cylinders. RV campground approved. 13.25" fire tray diameter. 65,000 BTU/HR.

Stock#	Description	Qty
58035	Big Red Campfire	1

Little Red Campfire®

Take your fire with you! Our compact, portable campfire is great for campsites with restrictions against in-ground fires. Tailgating, or on the patio. . . its size is convenient for wherever you need a fire. Realistic log set and full 9.5" diameter ring burner help create the natural look and ambiance of from-scratch campfires. Sturdy lid and security latches make it safe and easy to transport. Includes 8' propane hose for use with standard LP gas cylinders. RV campground approved. 11.25" fire tray diameter. 65,000 BTU/HR.

58031	Little Red Campfire	1

Portable Propane Campfire

Features like an elevated fire tray and heat resistant base make this Portable Campfire perfect for use in campgrounds with fire restrictions; great for residential porch and patio use as well. Large 14 1/2" burner ring allows for even distribution of gas and flame. 8' hose and adjustable regulator allows easy control of desired fire size up to 65,000 BTUs per hour with no ash, no mess and no smoke. Includes two bags of lava rocks. Legs fold completely under to fit into included storage bag.

Sparker Igniters

GM12 Continuous Ignition Multi-Sparker
This handy igniter is the one designed exclusively for igniting gas appliances. No butane to refill. The continuous ignition piezo electric sparker assures a large and immediate continuous spark. The automatic illumination micro-light and curved nozzle make tough lighting jobs easy. Uses one C battery (included).
