RHINO EXTREME RV SEWER KITS Improved design for better performance.

New features include:

- An exoskeleton design that bears the brunt of abrasion, protecting the sewer hose from pinholes and helping to prevent leaks
- A hose that is both crushproof and collapsible
- Improved compression ratio for storage over the previous RhinoEXTREME design

All of the features that RVers are looking for in a complete kit. The RhinoEXTREME hose features new exoskeleton reinforcement, which protects the hose from pinholes and leaks by bearing the brunt of abrasion from use. ELITE-S WEIGHT DISTRIBUTION HITCHES Experience safer, easier trailer towing with the Eaz-Lift Elite-S. This weight distribution hitch features a no-chain design with permanent, built-in sway control. Built-in sway control uses two points of steel-on-steel bracket friction to stop and correct trailer sway. The hookup brackets provide installation flexibility—allowing simple installation around battery boxes, gas tanks, and other obstructions. This hitch allows faster installation on top & bottom-mount coupler-style trailers. An adjustment washer modifies the ball mount angle for adjusting the spring bar pre-load.

EAZ-LIFT TR3 WEIGHT DISTRIBUTION HITCHES

These hitches use an adjustable sway control system for improved towing. Constant sway resistance via a sway control clamp allows you to determine how much sway resistance is needed. Unlike other sway control weight distribution hitches, the TR3's sway resistance is achieved independently of the trailer tongue weight. This allows you to have infinite adjustment between zero sway control and the factory preset maximum sway resistance. With the TR3, you also have the option to disengage the sway control function to prevent any unsafe maneuvering situations in adverse weather conditions where roads are slippery.

WDH with Adjustable Sway Technology

RECURVE R3 A weight distribution hitch that features adjustable sway technology. By simply adjusting the clamp, you can decide how much sway control is exerted on the trailer. The ReCurve R3 will distribute the weight of your trailer evenly across the axles of the tow vehicle and provide as much sway control as you choose. Or, turn the sway control completely off in dangerous or icy road conditions. Its top-loading spring bars give it more ground clearance than other hitches, and the streamlined design makes the hitch and the trailer move as one, while creating a sleek look. Hitch ball included.

WDH with Adaptive Sway Technology[®] WDH

RECURVE R6 Our most user-friendly weight distribution hitch, featuring premium adaptive sway technology.. With other sway control hitches, turning can be an even bigger hassle than it usually is with a trailer because the sway control "locks" the trailer straight. With the ReCurve R6, the hitch will control your sway for normal driving, but when you turn, the sway control will automatically disengage, making maneuvering smoother and easier on the driver. The sway control can easily be turned completely off in dangerous or icy road conditions. Its top-loading spring bars give it more ground clearance than other weight distribution hitches, and the streamlined design makes the hitch and the trailer move as one, while creating a sleek and subtle look. Hitch ball included.

ROUND BAR WEIGHT DISTRIBUTING HITCHES Over five decades ago, Eaz-lift became the first patented weight distributing system in North America. Designed with fewer parts, forge-tapered round spring steel bars provide a smoother ride with interchangeable bars that have positive latching action for operation. Eaz-Lift has a broad selection of weight distributing hitches that include right and left hand sway control mounts and bolt-together ball mounts, providing adjustability of ball height and ball mount angle. Each hitch includes hookup brackets, spring bars, chains, ball mount, shank and hitch pin, clip and bolt package for adjustable hitches.

Why Eaz-Lift Sway Controls are better

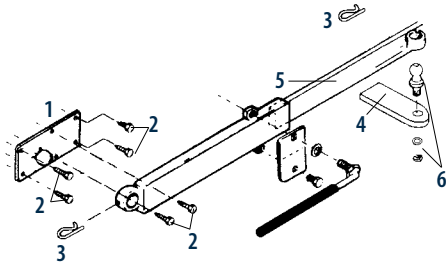

than cam-action type sway controls:

- Eaz-Lift Sway Controls do not create noise problems as does the cam-action type.
- Eaz-Lift Sway Controls do not reduce road clearance.
- Eaz-Lift Sway Controls are easily released when road conditions do not warrant their use (unlike cam-action type sway controls that depend upon hitch weight to operate and cannot be released on icy and oily road conditions where straight line action would possibly impair driving control).
- Eaz-Lift Sway Controls do not lose sway control ability during turns.

MAGNETIC HITCH ALIGNMENT KIT

Camco's Magnetic Hitch Alignment Kit is designed for one-person hookup on the first try every time. Easily visible balls take the guesswork out of linking up your hitch. Attach one guide to the tow vehicle and one to the trailer. Guides extend to 50" for easy viewing, and a swivel base allows the guides to be positioned directly above hitch and receiver. This system works with virtually any tow vehicle and any trailer: gooseneck trailers, fifth wheel trailers, horse trailers and boat trailers.

- 44603 Hitch Alignment Kit

BALL MOUNTS BALL MOUNTS are 2" x 2" and function as a weight carrying hitch. Ball mounts create a ball platform for attaching a hitch ball. The ball mounts or utility hitch bar length are determined by measuring from the center of the pull pin to the center of the hitch ball hole. The drop or rise is determined by measuring from the top of the mount to the top of the tongue. All 2" x 2" ball mount shank holes are 1", except 48282, which has a 3/4" hole.
