G. Kuuma Thermostatic Mixing Valve

Kuuma's Thermostatic Mixing Valve for Marine Water Heaters allows hot water to last longer. It delivers hot water at a reduced temperature by mixing in cold water to your water heater's outlet line. The mixing valve installs on the hot water outlet side of the water heater (additional plumbing will be required). Compatible with most water heaters, the mixing valve has an outlet temperature range of 85-degrees Fahrenheit to 130-degrees Fahrenheit; however, it is factory set to deliver up to 120-degrees Fahrenheit. To adjust between 120-degrees Fahrenheit and 130-degrees Fahrenheit, the cap will need to be removed and the limit stop adjusted (refer to the instructions). The temperature can be adjusted by turning the featured knob either clockwise (to reduce the temperature) or counterclockwise (to increase the temperature). The mixing valve is constructed of durable brass and includes a threaded female 1/2-inch NPT kit.

D. Armada AquaBlock™ Waterproof & Stain Repellent

Armada AquaBlock uses virtually the same fluorocarbon technology as the mills do to last an entire season. AquaBlock has been independently laboratory tested against the three leading waterproofing products in the marine industry and was found superior.

Ball Mounts

Ball mounts come in popular sizes, 2" x 2", 1-1/4" x 1-1/4", and are used to convert a receiver from a weight distributing to a weight carrying hitch. Ball mounts create a ball platform for attaching a hitch ball. The ball mounts or utility hitch bar length are determined by measuring from the center of the pull pin to the center of the hitch ball hole. The drop or rise is determined by measuring from the top of the mount to the top of the tongue (See ball mount selection chart). All 2" x 2" ball mount shank holes are 1", except 48280 and 48282, which have a 3/4" hole.
